

Instant quality ...

Instant issuing

PMP-instant is a professional solution for the instant issuance of cards. Even high-value cards like banking or ID cards can be produced quickly and at the highest level of security.

Intuitive graphical user interfaces guide the operator through the data capturing and issuance process. As a first step, personal data stored in an ID document is automatically transferred into a smart form. Then, additional information like photo, finger print, signature or PIN of choice, can be added. After online data verification and data preparation, the cards are personalized on the spot. Data transmitted from the remote issuance points is stored and administered in a central database. If required, stock management functionalities can administer all material inventories.

Open interfaces make it possible to, on the one hand, embed PMP-instant into established software environments and, on the other hand, to integrate any hardware needed for data capturing and personalization. PMP-instant operates at the highest level of security featuring secure data preparation, encrypted data transfer and storage, as well as audit log. The software was developed according to Global Platform, Common Criteria, EMV, ICAO and Gematik.

Improve: image and desirability

- No waiting time for customer
- Immediate activation and utilization
- Increased customer loyalty due to personal contact
- State-of-the-art image of the card issuer

Reduce: operational efforts

- Short and transparent issuing process
- Simplified logistics and minimized costs
- One-time personal customer authentication

Best done with PMP-instant

- Intuitive operation
- Open interfaces for integration into existing software environments
- Open interfaces for hardware integration (data capturing & personalization)
- Secure data preparation, encrypted data transfer and storage, audit log
- Complies with international security standards
